Remarks

- Measurement time depends on the reflectivity of the measurement object and on the measurement mode.
- **Teaching procedure:** Position measured object at desired measurement distance. Connect teach input to $+U_B$ for $\geq 2\text{s}$. Reconnect teach input to GND, switching output is programmed.
- The voltage output of the analogue version is calibrated before delivery.
- **Approved purpose:** The ODSL 8 laser distance sensors are optical electronic sensors for the optical, contactless measurement of distance to objects.
